A: Uses and gratifications theory

6. Priming refers to the way that people determine the importance of news and how they contextualise them, it is a process of selective control.

A: False

Virality

1. Zarella (2011) identified 4 conditions under which certain types of information are easier to spread than others. Which of the following does NOT fit them? A: People must be eager for information.

2. Zarella (2011) identified 3 criteria of virality /contagion. Which one is NOT part of his list?

A: Persistence

Social networks

1. Couchsurfing is...

A: a social network based on the exchange of goods and services (sharing economy)

2. What was the first website based on online social networks?

A: Six Degrees

3. According to Granovetter the ties that are most likely to offer new information and access to resources are:

A: Weak ties

4. According to Castells (2015) networks became the most efficient form of organization

due to 3 major traits that benefit the technological environment. Identify the option that is NOT part of Castells' classification.

A: the capacity to generate change.

5. Christakis and Fowler (2015) structured 5 main rules that help us understand why social networks exist and how they work. Which of the following is NOT one of them?

A: We live in a networked society.

6. Christakis and Fowler (2015) identified 3 possible reasons why our influence in a network may be limited. One of them highlights that, in general, we do not influence and are not influenced by people 4 or more degrees away. do they call this explanation?

A: the network instability explanation

What

7. Which of the following options represents one of the aspects that measure the centrality of a social network?

A: Degree with its 2 categories (Indegree, Out degree)

8. Burt (1992) considers that there are 2 types of benefits from structural holes in a network: information and control, which situation is not part of the information benefits category?

A: Central actors that are well connected to multiple groups that are mutually unconnected benefit from more negotiation opportunities compared to those at the edge (of the network)

9. Burt (1992) considers that the advantages one gains from their network very based on certain factors. Which of the following is NOT on his list?

A: Connectivity

10. According to Burt (2000) an ego is at a higher advantage in a network if the density of ties between alters is lower, having a higher chance of obtaining nonredundant information.

A: True

11. Which of the following options does NOT represent an aspect that evaluates the strength of a social tie that is positive and symmetrical?

A: Number of connections.

12. According to Maloney-Krichmor and Preece (2002) the main elements of virtual communities are: people, technology, culture and social networks,

A: False

13. One of the options is INCORRECT. Internet civilization is characterized A: Information is a result of networked society.

14. According to their purpose, there are multiple types of online communities. Which of the following is NOT one of them?

A: Interaction communities

15. A bot is a person that intentionally causes an online conflict or offends other users in an online community or social network to distract and divide the audience by posting instigating or unrelated messages.

A: False.

Social media

1. Big Data helps identify take social media accounts to reduce traffic on Social media and regulate it.

A: True
